Subject: Gold King Mine - adit rehab

Hello Todd,

Following up on our previous discussion, there are details that we need to work through on the planning of the work on the Gold King. One of the things we talked about was getting a good inventory of the materials the San Juan Corporation (SJC) has available to contribute to the rehab of the portal and inby steel or timber sets.

My plan is to develop a an estimate and specifications for this work soon so that we can get a bid package out. If you have additional information about the adit – such as mine maps and descriptions of the ground near the portal and inby 100 ft and photographs that would be important to have for developing or bid package. The timing as to when we get this started is not fixed, but later in the summer –early September is the target.

In addition, I will work up an access agreement for you to allow EPA to do the work that includes that information about the materials to be supplied by SJC.

Please let me know when you will be able to provide that information. We'll see if we can make this happen this year.

Sincerely,

Steve
